**SEPTIC TANK NOTES**

- I. air should be excluded from tank to encourage growth of anaerobic bacteria required to liquify the sludge and facilitate flow of effluent
- II. accumulated gases are expected to be expelled through vent at least 600mm above eaves with open ends protected against nesting birds
- III. drain should be given sufficient fall ( e.g 1 in 40 for 100mm dia. pipe )
- IV. joints should be properly made to prevent blocking of the aperture
- V. septic tank must be constructed in concrete with the top at least 150mm above ground level
- VI. overall depth of septic tank below ground level is determined by the inlet and shall not be less than 1800mm the depth below inlet level shall also be 1400 – 1500mm and any case not less than 1200mm
- VII. baffle screens must be provided to prevent direct flow between inlet and outlet
- VIII. septic tank should be open every six months and depth of top crust ascertained if this exceeds 30cm surplus should be removed and buried
